

Secure Single Sign-On

PROVIDE HASSLE-FREE AND SECURE
ACCESS TO YOUR NETWORK, SYSTEMS,
AND ALL APPLICATIONS.

RapidIdentity's unified identity and access management platform delivers streamlined Single Sign-On (SSO) to all enterprise applications deployed on-premise, in the cloud, or in a hybrid environment. Give your employees, partners, vendors, and customers secure, one-click access to all approved applications.

CUSTOMIZABLE APPLICATION PORTAL

Provide users with one-click access to authorized web applications. Use the portal's dynamic interface to hide, remove, and organize applications.

USER-FRIENDLY SELF-SERVICE CAPABILITIES

Reduce help desk costs by empowering users to reset passwords across connected systems, manage their profiles and accounts, and make access requests.

TRUE ENTERPRISE SINGLE SIGN-ON

Enable a seamless sign-on experience where users log into their Windows desktop and credentials are securely passed to locally installed, virtual, or web apps.

MOBILE SUPPORT

Keep users productive on the go with easy SSO access to cloud-based applications from iOS, Android, and other mobile devices.

CONFIGURE SSO INTO ANY APPLICATION

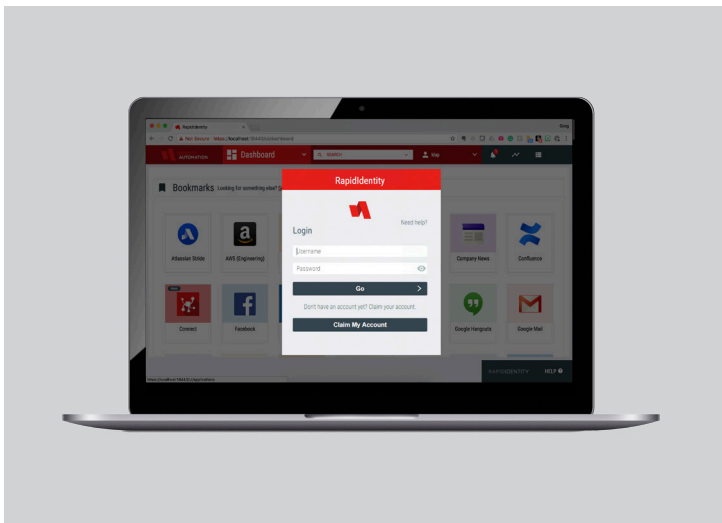

Integrate with thousands of cloud-based and on-premises applications and services (standards compliant or not) using SAML 2.0, OAuth, OpenID Connect, WS-Fed, or form-based authentication.

SECURE SESSION MANAGEMENT

View and manage individual user sessions in real-time when users are logged into the application portal.

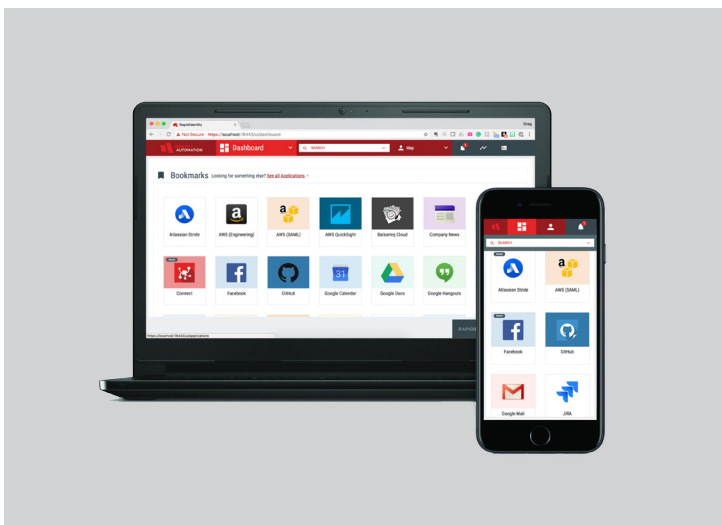

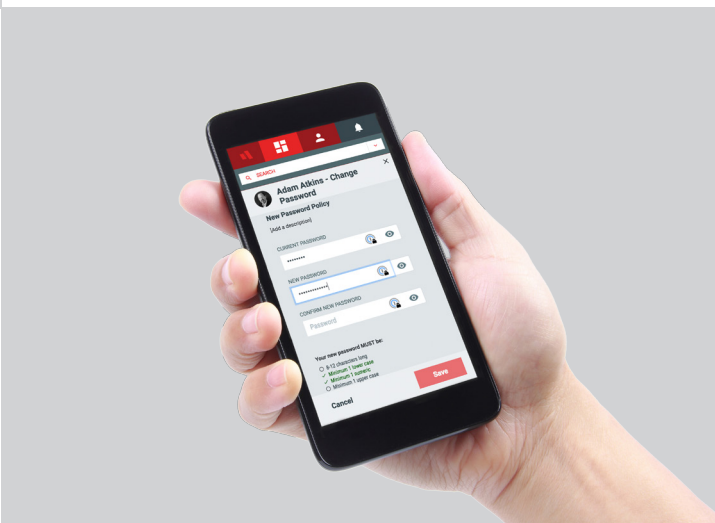

BOOST PRODUCTIVITY

RapidIdentity streamlines and automates password management, so employees can focus on your business's core needs. Users only have to remember a single set of credentials or can bypass passwords entirely with an alternative authentication method—saving time and money, while significantly reducing the risk of breach.

PUT AN END TO PASSWORD-RELATED SUPPORT CALLS

Nearly 50% of all help desk calls are related to password and login issues, according to Gartner. RapidIdentity puts user-friendly, self-service, and delegated password reset tools that all-but-eliminate these types of calls in the hands of users and managers, freeing up your help desk team to focus on other strategic initiatives.

ACCELERATE USER ADOPTION OF COMPANY-PROMOTED APPS

Getting internal and external users to adopt company-sanctioned applications and services starts with a great experience at the account login step. The RapidIdentity Portal drives greater adoption of corporate-approved systems, while minimizing shadow IT and the security risk of unsanctioned applications. Plus, with RapidIdentity SSO you get unlimited SSO integrations.
